Exam 1 Review Sheet

The exam has 80 questions, all multiple choice and true/false. Each question is worth 1.25 points, so the maximum score is 100 points.

This review sheet contains many, but not all, of the topics covered. You are still responsible for other items reviewed in the presentation slides and Connect Assignments.

Key Concepts to Review

- Review the primary reasons for studying nutrition and how diet impacts long-term health and disease risk
- Distinguish between macronutrients and micronutrients
- Know the difference between essential nutrients and nonessential nutrients
- Memorize the specific calories per gram provided by carbohydrates, protein, and fat
- Recognize factors that influence everyday food selection
- Identify red flags in health claims (i.e., anecdotes, testimonials, pseudoscience)
- Understand the specific definitions and applications for EAR, RDA, AI, AMDR, and UL
- Know the overarching themes in the *Dietary Guidelines for Americans 2025-2030* (i.e., limit intake of added sugars)
- Recall the food groups, plate proportions, and key recommendations for MyPlate
- Explain the difference between food enrichment and fortification
- Recognize the difference between mechanical and chemical digestion
- Describe the roles of the mouth, epiglottis, sphincters, and villi in the digestive tract
- Outline the digestive contributions of the pancreas, liver, and gallbladder
- Compare nutrient transport via the hepatic portal vein versus lacteals
- Understand the differences between prebiotics and probiotics

Sample Practice Questions

Question 1

A serving of food contains 15 g carbohydrate, 3 g protein, 5 g fat, 5 mg vitamin C, and 100 mL water. Based on this information, a serving of this food supplies:

A) 87 kcals

B) 97 kcals

C) 107 kcals

D) 117 kcals

Question 2

According to the MyPlate guidelines, fruits and vegetables should account for about _____ of the food on a person's plate.

A) one-quarter

B) one-third

C) one-half

D) two-thirds

Question 3

Small amounts of food move from the back of the mouth and through the esophagus by involuntary muscular movements called:

A) lipolysis

B) gluconeogenesis

C) segmentation

D) peristalsis
